- Commitment to private client wealth management and financial planning
- Personalized, high-touch client service backed by recognized asset management expertise
- Assets Under Management of \$11.2 billion as of 12.31.2019

STRATEGY OVERVIEW AND OBJECTIVE

- BetaCore is a diversified asset allocation strategy built around a core of passive and strategic beta ETFs that can be complimented by Appleton’s active satellites, including: investment grade taxable and municipal bonds, large cap growth, dividend equity, or value stock strategies.
- The goal is to deliver a comprehensive, tailored solution pursuing broad market exposure with attractive risk-adjusted returns and dampened volatility.
- Traditional passive ETFs provide market cap weighted index returns at low cost and with high levels of transparency and liquidity.
- Strategic Beta ETFs apply rules-based methodologies to indices to capture market factors such as size, value, quality, profitability, and momentum. At Appleton, we utilize a multi-factor approach in select asset classes.
- Active strategies offer the potential for enhanced diversification and excess returns.

INVESTMENT PHILOSOPHY & PROCESS

Our ETF models offer efficient access to desired asset class or strategy exposures and incorporate traditional passive and strategic beta strategies.

Appleton’s active stock strategies combine fundamental analysis, macroeconomic insight, and quantitative screening in seeking to identify the most attractive stocks in the most favorable sectors.

Appleton’s active fixed income aims to capture value across the yield curve, while matching interest rate sensitivity to the given rate cycle.

Core-Satellite Portfolio Management
Seeks to combine the benefits of active and passive investment strategies

CHARACTERISTICS AND ATTRIBUTES

Low Volatility	Utilizing lower correlation asset classes can reduce overall portfolio volatility.
Tax Efficiency	ETFs enjoy two tax advantages over active mutual funds. The vast majority of ETFs are index-based which can lead to low turnover due to infrequent reconstitution of the underlying index. The structure of ETFs also allows for the transfer of low-cost basis holdings to primary market dealers via in-kind redemptions.
Cost Effective	Management and trading costs are relatively low. The average management fee of index based and strategic beta ETFs continues to decline.
Transparent	Unlike mutual funds, ETF holdings are available daily and typically track a published index.
Liquidity	In both core and satellite strategies, the Appleton team emphasizes liquid securities. ETFs trade throughout the day, offering greater liquidity than traditional active mutual funds which trade once a day at a closing NAV.
Potential to Outperform	Utilizing active management in the satellites provides the portfolio the potential to outperform its benchmark through security selection. Using solely index ETFs typically does not provide the opportunity to outperform, but does create lower tracking error.
